

# HOUSEHOLD WASTE CHART\*

The following chart from the Water Environment Federation will show you effective ways to dispose of household waste and contribute to a sustainable clean environment.

Blue waves ≈ indicate products which can be poured down the drain with plenty of water. If you have a septic tank, additional caution should be exercised when dumping these items down the drain. In fact, because septic systems rely on healthy bacteria, there are certain chemical substances that cannot be used with them. Be sure to read the labels to determine if a product could damage septic systems.

Yellow triangles ▼ indicate materials which should not be poured down the drain, but can be safely disposed of in a sanitary landfill or incinerator. Note that medicines can often be taken to a community drug take-back program or mixed with undesirable substances such as kitty litter or coffee grounds. Pills (except narcotics) can also be dissolved and mixed with regular trash. Be sure the material is properly contained before it is put out for collection or carried to the landfill. The red octagons ⊗ indicate hazardous wastes or materials that should be saved for a community-wide collection day or given to a licensed hazardous waste contractor when left over or unused. (Even the empty containers should be taken to a licensed contractor if one is available.)

Green leaves 🌿 indicate material that can be recycled or reused or shared with neighbors or family members. If there is a recycling program in your area, take the materials there. If not, encourage local officials to start a recycling program.

\*The information contained in this chart is intended as a general guideline. Laws and regulations may vary from state to state. For more information on the safest way to dispose of these and other products, contact your area's solid and hazardous waste department or federal or state environmental agency. Check manufacturer's label for specific disposal guidelines.
