

Monday's status with water:

- Tank level is near full at 31.6 feet (maximum is 33 feet)
- The recent rain will help fill the reservoir so we won't have any concern with that although that has not been our problem.
- The plant has caught up but please remember that conservation is still needed through the processor's summer. We can go backwards very quickly as we have seen.
- We encourage the public to continue to report leaks and conserve.
