

**VISERA OTV-S7**

Excellent Illumination, Perfect Imaging and Digital Documentation

High performance Imaging

High performance handling

Cost-effectiveness

Ease-of-use

The Olympus VISERA video system is the ultimate surgical endoscopic imaging device. Uniquely configurable to the individual needs of the user, VISERA integrates the entire imaging chain from camera to computer and has been designed to meet the many demanding requirements of clinicians, theatre staff and hospital administrators. From cameras and light sources to ancillaries, Olympus's wide range of video imaging products promises to exceed expectations concerning image quality. With versatile design and unprecedented operability, Olympus video imaging products ensure that the Operating Room will run more smoothly than ever. Reliance on high performance and operational convenience is guaranteed.
