PCA Pump – Abbott GemStar®

GemStar® Pain Management Infusion System

Variety of Care Settings:

The GemStar Pain Management System offers safe and effective pain management medication infusion for patients in a variety of care settings. Part of the overall GemStar Infusion System line of products, two devices, easily distinguished by their distinctive bumper guard colors, offer patients pain management in a small, lightweight design

All GemStar devices are built with shock-resistant exteriors over a rugged aluminum frame and provide a wide range of options within an easy-to-program interface.

The units can also be set up with custom configurations to be compliant with the clinical protocols of an individual healthcare facility. This allows healthcare facilities to tailor each therapy to meet specific clinical objectives.

GemStar units have enhanced security features with four keypad lockouts, free-flow protection and mandatory confirmation screens.

GemStar Pain Management - Yellow

The yellow device provides easy-to-operate functions to administer continuous or intermittent pain management using standard prescriptions.

GemStar Pain Management - Blue

The blue device can provide multiple epidural therapies in addition to its pain management functions. A more versatile unit, the blue device can be deployed in a wider variety of clinical settings.
